

# Metal Gear Solid

deutsches Tastaturlayout / [english keyboard layout](#)

**Move:** Move / Move Objects  
**LMB:** Activate / Fire Weapon  
**RMB:** Crawl

## CHEATS taken from [dlh.net]

Add '-cheatenable' into command line of the game (mgsi.exe -cheatenable) and use the following keys in game:

Key	Effect
[F2]	God mode. Please be patient about this mode ability to switch off, so if you see life amount decreasing just press [F2] again.
[F4]	Sometimes (I haven't idea about this undeterministic work) makes infinite ammo.
[F5]	Normal view mode. Useful after F6 (see later) effect.
[F6]	Observe mode. Seems the camera places into the center of the level and you can navigate it. Use [F5] to turn back to normal mode.
[F7]	Fast level restart (NOT reload!). You will be placed at level start but will have all that you have before key press.
[F8/F9/F11/F12]	Some sort of texturing modes switching. Just experiment with this key by yourself.
